

**Looking for permanent staff to**

## **Change the world!**

### **Setting**

We are a funded startup, working on body fluids analytical medical devices. We are searching for a Mechanical engineer to support our current R&D agenda and conduct applied research for advancing the technical readiness of the device and process.

### **Basic requirements**

Successful completion of one the following technical curricula, master/PhD level: Microsystems Technology, Natural sciences (Physics or Chemistry), Mechatronics, Mechanical engineering or other disciplines that lead to very good comprehension of and practical experience with design and construction of plastic or metal parts, with focus on (micro-) fluidic devices (i.e. design, simulation, manufacturing, use cases). Hands-on attitude needed, must be happy both to construct and to “manu”facture prototypes in the workshop.

### **Must-have assets are**

- Experience in the construction of complex devices
- Worked successfully with Solidworks
- Construction of polymer based parts
- Interest in working in a small team, with the chance of personal growth and taking responsibility
- Interest in building things from scratch
- Self-driven with can-do attitude, with an interest to learn
- Interdisciplinary thinking
- Very good English or German language skills

### **Good-to-have additional skills**

- Mechanical simulation
- PLM system (i.e. ARAS)
- Understanding of Optics
- Experience with injection molding and tools
- Additive manufacturing (high-end FDM and sintering tools available)
- Polymer technology, biology, medical technology, manufacturing

### **Place of work**

Berlin, Germany

### **When can you start?**

As soon as we have agreed that we fit together.

### **We welcome your application!**

We are happy to receive your CV with a brief introduction why you believe that we should talk.

Please send your application to [application@midge-medical.com](mailto:application@midge-medical.com).
